# TokTickIT Lab 4

> **WORKING DRAFT — DO NOT SUBMIT YET.** PR #59 is approved and merged to `lab4-staging`. Before submission, integrate current `main` in the release PR, update the Project Kanban to Done, add the student's own reflection in Part 4, complete the human checks in Part 9, and rerun final verification against `main`.

Repository: TokTickIT · Evidence branch: `lab4-staging` · Evidence snapshot: 2026-10-14

# Answer Part 1

### Git Use with Engineering Workflow

- Six Lab 4 Issues use run-number branches; feature PRs #54–#59 are approved and merged into `lab4-staging`.
- Approvals and merge commits: reviewer.md.
- Final Project/Kanban state with all Issues Done and the separately reviewed release PR to `main`: pending.
- README · .gitignore · repository structure.

# Answer Part 2

### Spec DD

The contract was reviewed before implementation work and is recorded in the planning PR. See specification.md, api-spec.md, and ui-spec.md.

# Answer Part 3

### Test DD and Traceability

Test plan, AC traceability, files, and results. On `lab4-staging`: server 19 files / 40 tests; client 10 files / 16 tests; Lab 4 browser 8 tests; server and client production builds pass. Final output from `main` remains pending release merge.

# Answer Part 4

### AI Use with Reflection

AI-use record and selected prompts. The student's own reflection has not yet been supplied and must be written before submission; do not submit this draft with the reflection prompt unchanged.

# Answer Part 5

### Working IT Staff Dashboard UI

Backend-calculated metrics, assigned actions, recent/urgent tickets, filters, loading/error states, and links are covered by API/component/E2E checks. Desktop, tablet, and mobile screenshots; calculations and tests are linked in tests.md.

# Answer Part 6

### Working Actions Taken UI

Evidence covers action list/create/read-only requester view, validation, edit and status controls, idempotent retry component coverage, API role/assignee enforcement, and safe errors. Action detail screenshots · API contract.

# Answer Part 7

### Working Ticket Workflow

Permitted and forbidden transitions, resolution evidence, reason requirements, stale versions, and requester advisory invariance are covered by workflow API, component, and browser checks. See business rules and test results.

# Answer Part 8

### Working Requester Dashboard and Final Regression UI

Requester metrics are session-owner scoped; dashboard filters link to detailed tickets. Full earlier-lab server/client regressions pass. Requester dashboard screenshots · representative regression evidence.

# Answer Part 9

### Zen Green UI, Responsive, Accessibility, and Final Polish

Zen Green styles are retained. Dashboard and action-detail screenshots cover desktop, tablet, and mobile; browser checks cover visible keyboard focus, an associated Status label, and no horizontal overflow at 390/768/1280px. See the visual/accessibility checklist. Screen-reader, contrast, and extended keyboard checks remain for a human reviewer before the final PDF is submitted.
